Updated Covid Guidance

You may be able to end your self-isolation period before the end of the 10 full days. You can take an LFD test from 5 days after the day your symptoms started (or the day your test was taken if you did not have symptoms), and another LFD test on the following day. If both these test results are negative, and you do not have a high temperature, you may end your self-isolation after the second negative test result.

[Report your LFD test results](#) after taking each test.

You should not take an LFD test before the fifth day of your self-isolation period, and you should only end your self-isolation after you have had 2 negative LFD tests taken on consecutive days. You should stop testing after you have had 2 consecutive negative test results.

This guidance also applies to children and young people who usually attend an education or childcare setting.

Examples of when to end self-isolation if you have had COVID-19 symptoms or have received a positive COVID-19 test result
