

The components from each lesson are building blocks to make the composite (finished product).

Evaluate and Improve – the children will evaluate their own product and when appropriate make adjustments to improve it.

Create/Apply – the children will use their plan to apply their new skills when making their own product.

Design – the children will use their knowledge to design a product they will make to solve the initial problem.

Teach new skill – the children will learn new vocabulary and practice a newly taught skill.

Explore – the children evaluate/deconstruct/investigate/research existing products.

Problem – the children are given a problem to solve using their design knowledge and skills.
